

Here comes the Sun!

It has been a long winter but finally the days are longer and temperatures are warmer!

It is also a relief to be getting back to relative normality after the Covid19 pandemic. We are still being very careful however and as well as the normal decontamination and sterilisation procedures, we have continued our enhanced room ventilation, PPE and surface cleaning regime.

It continues to be very important before each routine exam appointment to complete the medical questionnaire on the online portal by following the link from your reminder text/email. This keeps us updated every 6 months as to your general health which can affect your dental care (if there are no changes please check through the form and re-save it). We are no longer requesting the pre-appointment Covid questionnaire on the online portal however but still request that you contact us as early as possible before your appointment if you have any Covid/flu symptoms.

If you have any questions or need to contact us for any reason you also have the option to email us as well as using the phone. The email address to use is: reception@stalybridgedentalcare.co.uk

Whitening and cosmetic treatment

As many of you know, as well as providing bespoke preventive dental care to keep your mouth healthy for life, we also provide cosmetic dental procedures to improve your smile. All types of treatment are available, either by ourselves personally or in partnership with selected and trusted colleagues.

Some of the options available are:

Tooth whitening - brighten your smile with this non-invasive, easy treatment option that can make a big difference.

Replacing stained or discoloured old white fillings on your front teeth - white fillings (especially the older generation type) will eventually stain or chip and it is relatively straight forward to repair, repolish or replace these so that they match your natural teeth.

Replacing old amalgam fillings on your back teeth - old amalgam fillings can be unsightly on teeth mid-way back in your mouth. These can be replaced with white fillings to improve the appearance of your smile.

Alignment and composite bonding - for the alignment/straightening we would refer to our specialist orthodontic colleagues followed by providing any necessary composite bonding required to change the contour of misshapen/worn teeth. This is the least invasive option to provide a "smile makeover" and so kindest to teeth for long term health.

New patients

We are now accepting a limited number of new patients again as we have finally managed to get through the back log caused by Covid. If you know anyone who is interested in being a long-term practice member then there is now an expression of interest form to complete on the website in order to give us the information required. You can also mention them directly to reception if that is easier.

We look forward to seeing you at the practice soon. All the team at Stalybridge Dental Care.
